

**NATIONAL CAPITAL TERRITORY OF DELHI**

**INDEX OF  
INDUSTRIAL PRODUCTION  
2004-2005**

**(BASE YEAR : 1993-94)**

**GOVT. OF N.C.T. OF DELHI  
DIRECTORATE OF ECONOMICS & STATISTICS  
AND  
OFFICE OF THE CHIEF REGISTRAR OF BIRTHS & DEATHS  
ROOM NO. 148, OLD SECRETARIAT,  
DELHI – 110 054.**

## **P R E F A C E**

The Directorate of Economics & Statistics, Govt. of NCT of Delhi have regularly been compiling the Index of Industrial Production for the National Capital Territory of Delhi since 1976 in order to study the growth of industrial sector over a period of time.

Keeping in view the changes in the industrial development of the Territory during the last two decades and to have a comparable month-wise series of States/U.Ts. the base year has been shifted to 1993-94 from 1980-81 on the basis of recommendations of Technical Advisory Committee, setup by IIP Unit, Central Statistical Organisation, Ministry of Statistics & Programme Implementation, Government of India. At present the exercise to shift the base year from 1993-94 to 1999-2000 is also under progress and new base year will be adopted in near future as per the recommendations of Central Statistical Organisation.

The present brochure, sixth in the new series with base year 1993-94 presents the physical growth in the industrial sector of Delhi during the year 2004-05. Monthly index of industrial production on the basis of use based classification has also been incorporated in this compilation.

The brochure has been prepared by the Index of Industrial Production Unit of the Directorate of Economics & Statistics under the guidance of Dr. R.N. Sharma, Dy. Director whereas Sh.Brahm Singh, Research Officer has supervised the work at unit level. Data processing work has been done by Smt.Sunita Kalra under the guidance of Sh. K S Bansal, System Analyst of this Directorate. The strenuous efforts made by the officers and staff of I.I.P. unit in collection of production data and compiling the index of industrial production are highly appreciated.

The continuous and generous co-operation extended by the office of Chief Inspector of Factories, Labour Deptt. in the collection of the production data from selected industrial units in time for the purpose of compilation of index of Industrial Production is gratefully acknowledged. We are grateful to the officers of IIP Unit, Central Statistical Organisation, Ministry of Statistics & Programme Implementation, Govt. of India for regular encouragement during this process.

It is hoped that the present report on Index of Industrial Production will serve the purpose of users who are interested in the study of industrial development of the National Capital Territory of Delhi.

## CHAPTER I

### INTRODUCTION

Index of Industrial Production (IIP) is of immense use for measuring the industrial development Index of a State/Territory. The index indicates relative change over the time in the volume of production in non-agricultural commodities and it is effective tool to measure the trend of current Industrial Production . At the National level, the index of industrial production is being compiled by the Central Statistical Organisation, Govt. of India and is released on monthly basis. This index, however, does not serve the purpose for evaluating the industrial growth of a State/Union Territory. Therefore, the Directorate of Economics and Statistics has been compiling/releasing the index of industrial production for the National Capital Territory of Delhi on quarterly/annual basis since 1976.

In the first series, 1970 was the base year for compiling the IIP both by the Central Statistical Organisation & Directorate of Economics and Statistics. The base year was, however, shifted to 1980-81 in the year 1987 as per recommendations made by the Working Group so as to accommodate the latest structural developments that have taken place in the industrial profile during the seventies. Accordingly the Directorate of Economics and Statistics also adopted the base year of 1980-81 since 1989-90.

Like Delhi, other States have also been engaged in compiling the State Level Index of Industrial Production (IIP), but these Indices lacked comparability due to use of different base year, periodicity & data sources etc. The need for a comparable state level IIP to facilitate studies on the state-wise performance of Industrial sector has been felt for quite some time. Recognising the need, the Hon'ble Prime Minister also gave an assurance in the Parliament in April, 1993 that efforts would be made to make available comparable state level IIP's series.

Accordingly a Technical Advisory Committee (TAC) was constituted in June, 1995 to formulate guidelines and methodology for preparation of comparable IIP. On the basis of recommendations of TAC it was decided to bring forward the base year from 1980-81 to 1993-94. The terms of reference of the TAC on IIP were modified in November, 1996 to include the revision of the all India IIP as well.

As per the recommendations of TAC and further guidelines received from CSO, first report of comparable index of Industrial Production with base year 1993-94 comprising of monthly indices for the year 1999-2000 was released in June 2001. Since then DES has been compiling monthly Index of Industrial Production and releasing monthly data in Annual Reports of IIP on regular basis.

## **CHAPTER II**

### **METHODOLOGY:**

#### **1. SELECTION OF ITEM BASKET FOR MANUFACTURING SECTOR**

The item basket for the revised series of IIP for NCT of Delhi with base 1993-94, has been selected as recommended by TAC i.e., the selected items accounted for nearly 80% of the total output for the manufacturing sector during the base year.

However, the above criteria for selection of items for IIP basket, (i.e. 80% of gross value of output) for selection has been relaxed in certain cases for better representation of all industrial division and ensured that provisionally selected items in the 2 digit industry groups, capture at least 60 percent of value of output of the particular group. The over-riding criteria for finalisation of item basket would be the regular flow of monthly production data from the source agencies.

#### **2. WEIGHTING DIAGRAM**

As recommended by TAC, the contribution of the unorganized manufacturing sector, based on follow-up surveys of the Economic Census has been taken into account for allocation of weights at the sectoral level, the three major industrial sectors, viz, mining and quarrying (excluded in the case of Delhi), manufacturing and electricity (excluding water and gas) have been considered. The proportions of Gross Value of output at current prices for these three sectors have been converted into sectoral weights such that their total equals to 1000. The value of output figures of electricity sector have been taken from the National Accounts Statistics (NAS) and the same for the manufacturing sector have been taken from the ASI detailed results 1993-94 (after adjustment for non-response). As regards the unorganized manufacturing sector, the information on Gross Value of output has been interpolated based on the DME, NDME, and OAME Surveys of 1989-90 and 1994-95.

#### **3. SAMPLING DESIGN**

Adopting the guidelines approved by TAC, the units have been first arranged in descending order of production and a cut off point of 60% which is a reasonable proportion of the item's total production in the State has been used to determine the sample size. The change in production of these selected units in the current period vis-a-vis their production as per ASI 1993-94, will give the relative change in the production of the item. The total production of an item in the current period can be estimated using the relative change in the production. This procedure facilitated in keeping sample size smaller at the same time capturing major portion of production of the item. Further, selection of larger units would also ensure better response in collection of regular monthly production data.

#### 4. COLLECTION OF DATA

For preparation of the Current Series (Base:1993-94) of Index of Industrial Production, for the National Capital Territory of Delhi, 348 industrial units have been selected for collection of production data in respect of 98 items. The base year (1993-94) production data in respect of the selected items have been noted from ASI 1993-94 schedules made available by NSSO. Again, for collection of monthly data for the subsequent period i.e. from April 2002 onwards the Industrial Units were approached/requested for submitting the monthly production returns of the selected items to the Directorate of Economics & Statistics. The response of units achieved through persistent efforts is around 99%.

#### 5. ESTIMATION PROCEDURE

To overcome a problem of delayed response/non-response the following procedure has been adopted for estimation of production of such non-responding units on monthly basis. Suppose out of say “n” units selected for a particular month  $n_1$  units give timely response and the remaining of  $n_2$  ( $n-n_1$ ) units might not submitted the return for the particular month in time. The production of item of these  $n_2$  non-responding units has been estimated on the basis of the trend in production of the  $n_1$  responding units. The trend in an item’s production is determined by taking the relative change in the monthly production of unit vis-a-vis the average monthly production of the same set of unit as per the latest available schedule of ASI. Thus, this relative change in production of responding units is used to determine the production of non-responding units during a particular month.

#### 6. CALCULATION OF INDEX

The Index of Industrial Production is calculated as Weighted Arithmetic Mean of the production relatives in respect of selected items mathematically.

$$I = \frac{\sum R_i \times W_i}{\sum W_i}$$

Where I is the index,  $R_i$  is the production relative of item i and  $W_i$  is the weight allotted to it.

The production relative ( $R_i$ ) of ith item for the month has been calculated by using the following formula:

$$R_i = \frac{P_{ic}}{P_{io}} \times 100$$

Where  $P_{ic}$  = Production of ith item in the current month.

$P_{io}$  = Production of the ith item in the base month.

## **CHAPTER III**

### **INDEX OF INDUSTRIAL PRODUCTION-DELHI-A BRIEF ANALYSIS**

The index of Industrial production (IIP) is an indicator to measure the changes in the physical volume of the output of Industrial sector. This is the sixth compilation by the Directorate of Economics & Statistics for the Index of Industrial Production with base year 1993-94 for the National Capital Territory of Delhi on monthly basis. IIP being a short term measure for the assessment of Industrial Production, monthly IIP for NCT of Delhi has been compiled regularly. For the purpose of compiling the index, the industrial sector has been divided into manufacturing and electricity sectors with the weights of 943.004 and 56.996 respectively out of total weight 1000. The manufacturing sector has further, been divided into 15 major industrial groups at 2 digit level excluding electricity.

#### **SALIENT FEATURES OF MONTHLY INDEX OF INDUSTRIAL PRODUCTION, DURING 2004-05**

Average Annual Index of Industrial Production has shown an increase of 14.84% during 2004-05 as compared to 6.47% increase during 2003-04. During 2003-2004 IIP was 123.35 which increased to 141.66 during 2004-05. It is clear from Table 3.1 that only during February 2005 there is a nominal decline of 0.38% while for remaining eleven months of the year there is an improvement as compared to corresponding month of previous year. Impressive increase of 24.88% , 21.66% , 29.04% , 26.08% and 22.80% may be seen during July,Sept.,Oct.,Nov.04 and March 2005 respectively.

Performance of major Industrial groups as per 2 digit level of NIC 1987 may be seen in the Table 3.2. It is evident that annual average index has registered marked improvement as compared with the previous year in all the groups except for other manufacturing industries (38), manufacture of wool , silk and man made fiber textile (24), manufacture of Textile products including wearing apparel (26) where average annual index has declined. It is also worth mentioning that in case of manufacturing of textile products (group 26) index has shown regular improvement from January to March 2005.

**TABLE 3.1: MONTH-WISE INDEX OF INDUSTRIAL PRODUCTION IN  
MAJOR SECTORS OF INDUSTRY**

## CHAPTER – IV

### Use Based Index of Industrial Production

To capture the performance of different industrial groups it is essential to classify different industries on the basis of uses of items produced by these industries. On the analogy of the use based classification adopted by central statistical organisation, item basket of production has been classified into four main groups. These groups consist basic goods, capital goods, Intermediate goods and consumer goods. Consumer goods are further subdivided into consumer durable goods and consumer non-durable goods. Use based monthly index of Industrial Production will provide the information regarding the performance of above mentioned industries which are classified according to their product usage.

It may be seen from table 4.1 that consumer goods industry is predominant in the industrial production of NCT of Delhi and covers 63.62% of total production with a share of 12.31% for consumer durable goods and 51.31% for consumer non-durable goods. Share of Basic goods industries, Capital goods industries and Intermediate goods industries are 13.14% , 9.09% and 14.15% respectively when weights are allocated on the basis of their productions in the base year.

It is evident that the capital goods industry has shown a very impressive growth of 34.52% during 2004-05 when compared with the previous year i.e. 2003-2004. Intermediate goods industry has shown a growth of 18.57% as compare to previous year, while in case of Consumer goods industries growth of 6.10% has observed . In case of Basic goods a decline of 6.14% has been observed when compared with the previous year. When consumer durable goods and consumer non durable goods are analysed separately it has been observed that consumer durable goods industry has shown an impressive growth of 21.65% while that of consumer non durable goods industry has faced a retardation of 5.41% when compared with the previous year. It may be concluded that growth of industrial production of all kinds of goods remained satisfactory during 2004-05.

Weighting diagrams and annual average indices have also been depicted through graphical representation in the following pages.
