PREFACE

The Present Report on “Household Consumer Expenditure in Delhi” is brought out by this Directorate on the basis of sample survey conducted under the 60th NSS(January 2004 - June 2004) round. This is an annual survey held along with Employment & Unemployment in Delhi Survey in a small sample in order to bridge the data gap between two quinquennial surveys.

This report contains valuable data on consumption levels and pattern of households in Delhi. The report also provides information on the main demographic features like literacy, social-group, marital status, occupational distribution, and other aspects of living conditions like, source of energy for cooking/lighting, dwelling type covered area, ownership type, type of structure etc. and off-take from PDS. The data available from the report will be useful for policy makers in both government departments and other public and private institutions.

This report was prepared by Shri Sabir Ali, Statistical Officer under the able guidance of Sh. N.T. Krishna, Deputy Director. The extraordinary efforts put in by Sh. Manish Dev, Statistical Investigator, in the data analysis and report making stages deserves special mention. The role played by socio-economic unit in collection of data from the field against all odds is appreciated. The data processing was done by the EDP unit under the close guidance of Sh. K.S. Bansal, System Analyst.

The technical assistance provided by National Sample Survey Organisation, Government of India and the co-operation extended by the households is acknowledged.

HOUSEHOLD CONSUMER EXPENDITURE IN DELHI

EXECUTIVE SUMMARY

The following are the main highlights of the survey conducted during NSS 60th round between January 2004 and June 2004.

DEMOGRAPHIC FEATURES

- ❖ Estimated number of households in Delhi was about 32.75 lakh, and out of which 2.03 lakh were in rural and 30.72 lakh in urban areas.
- ❖ Average household size in rural, urban and Delhi worked out to 5.09, 4.59 and 4.62 persons per household respectively.
- ❖ More than 73.12% of the total population in Delhi were in MPCE (Rs.) class of 775 and above, 26.42% in 300-775 class and the remaining in less than 300 class.
- ❖ Of the total households, 16.50% belong to 'Scheduled Caste', 10.60% Other backward classes and 72.90% to other social groups.
- ❖ 10.76% of the total families in Delhi were having female as head of the household.
- ❖ Among females, 48.72% were currently married, 7.06% widowed and 0.45% divorced/separated.
- ❖ 85.66% of the population were literate with different levels of educational attainment.
- ❖ Literacy rate among SC is to extent of 74.17% as against 77.80% among OBC and 90.08% among other category of their population.
- ❖ Out of total literates, 17.74% attained primary level education, 14.81% secondary level, 13.00% higher secondary level, 0.81% diploma level and 22.49% gradates and above level education.
- ❖ 90.85% of males and 79.51% of females in Delhi were literate.
- ❖ Occupational distribution of the households revealed that, 36.27% were self-employed, 46.53% regular wage/salaried, 3.41% casual labour, only 0.71% agriculture labour and rest of 13.08 % engaged in other avocations.

FEATURES ON LIVING CONDITIONS

- ❖ 28.52% families live in dwellings with an average covered area ranging from 30-60 square meters, 35.34% in covered area above 60 square meters and 14.70% in dwellings with covered area of 20-30 square meters.
- ❖ 65.77% of dwellings were estimated to be owned, 25.16% rented and 8.07% in other category.
- ❖ 58.71% of the households were residing in Independent houses, 22.88% in flats and 18.41% in Chawl type of dwelling.
- ❖ 95.90% were living in Pucca Structure, 3.04% in semi-pucca and 1.06% in Kutchha structure.
- ❖ 85.09% households were using LPG, 9.59% Kerosene, 2.21% Dung cake, 1.74% firewood as the primary source of cooking in Delhi.

- ❖ 98.07% of the total households were dependent on Electricity for their lighting needs.

CONSUMER EXPENDITURE

- ❖ Monthly per capita expenditure (Rs.) was highest in Delhi both in rural and urban among states/UTs.
- ❖ Average monthly per capita expenditure of Delhi worked out to Rs.1511.16.
- ❖ During the survey period Jan-Jun 2004, the monthly per capita expenditure (MPCE) was Rs.1013.10 for rural and Rs. 1606.36 for urban Delhi.
- ❖ Rs.526.65 (34.85%) was spent on food items and Rs.984.51 (65.15%) on non-food items.
- ❖ Average monthly consumer expenditure per family was estimated as Rs.7044.52.
- ❖ Major heads of expenditure: Miscellaneous consumer services accounted for 22.77%, Milk and Milk products 10.28%, Conveyance 10.71%, cereals 5.79%, rent 5.95%, clothing 5.12%, fuels & lighting 7.73%, education 7.65%, beverages 5.27% of the MPCE.
- ❖ Per Capita monthly consumption of Cereals in rural and urban Delhi was 7.02 Kgs and 15.04 Kgs respectively.
- ❖ Out of the total purchases 98.00% of rice, 97.52% of wheat/atta and 77.34% of the kerosene was purchased from open market.

SECTION ONE

INTRODUCTION

Survey of household consumer expenditure provides the first and the foremost indicator of human living standard namely monthly per capita consumption expenditure (MPCE). It also brings to light inter-state and rural-urban variation in consumption of cereals, which is the most important constituent of Indian diet. This survey has multiple features to satisfy the thirst of various data user agencies despite the complexities involved in the collection of data. That is the reason why this survey has come to stay as a regular component of NSS rounds.

This survey is now conducted in two different ways, namely every five years with a much larger sample and annually with a relatively thin sample size. Household consumer expenditure survey conducted during NSS 60th round (January 2004 – June 2004) was an annual survey by integrating it with the multiple subjects of enquiry viz Employment and Unemployment and Morbidity & Health Care. In this round unlike earlier annual other than quinquennial rounds, Employment & Unemployment schedule 10 was separately canvassed. Accordingly, questions relating to activity status of household members, which were being collected through the Consumer Expenditure Schedule (1.0) have been dropped. By the end of NSS 60th round 6 quinquennial surveys on this subject were conducted by NSSO namely 27th (1972-73), 32nd (1977-78), 38th (1983), 43rd (1987-88), 50th (1993-94) and 55th (1999-2000). The annual series started from the NSS 42nd round (1986-87). The current NSS 60th round is sixteenth in this series.

OBJECTIVE SCOPE & COVERAGE

The main objective of the survey was to ascertain the level and pattern of household consumer expenditure and also provide necessary data to the researchers for conducting further studies on poverty line, nutritional status, sufficiency of food etc. The household consumer expenditure refers to the expenditure incurred by a household on domestic consumption during the reference period. It is the total monetary value of consumption of various groups of items i.e. food, fuel, light, clothing, footwear, miscellaneous goods & services and durable articles. The reference period used during the survey for collection of data on consumer expenditure varied for different items. For items of food, pan, tobacco & intoxicants, fuel & light and miscellaneous goods and services including medical (non-institutional), rents and taxes, data were collected for the reference period of 'last 30 days' preceding the date of survey. Information for items of clothing, footwear, education and medical (institutional) expenses and durable goods was collected for the reference period of 'last 365 days' preceding

the date of survey. Hence information gathered covers the sum of monetary value of all the items (i.e. goods & services) consumed by the household on domestic account during the reference period. During the round two different types of schedule 1.0 in different sets of households were canvassed this because 7 days reference period was introduced for items of edible oil, egg, fish and meat, vegetable, fruits, spices, beverages, processed food, pan tobacco and intoxicants. Since the usual reference period for these items had been 30 days in many rounds, it was felt necessary to build up adjustment factors for comparison with the estimates of earlier rounds. The two type of schedule differ only in respect of reference period of items mentioned above. Schedule Type 1 was used for 30 days reference period while Schedule Type 2 for 7 days reference period for all other items, the reference period used in Schedule Type 1 is the same as that used in Schedule Type 2. The expenditure incurred towards the productive enterprises of the household is excluded from household consumer expenditure. Besides the consumer expenditure, information on population features and status of living conditions was also collected. Results presented in the statements are based on combined results of schedule type 1 and schedule type 2. However, wherever comparison has been made with the central sample figures/data of schedule type 1 was used.

PLANNING OF FIELDWORK

During the 60th NSS round, data was collected by the field staff of the Directorate under the supervision of field officers. The data was collected through pre-designed schedules on door-to-door basis by adopting the personal interview technique. To elicit co-operation from informants, wide publicity was given about the purpose of survey.

SCHEME OF THE REPORT

The report is presented in five sections. Section two and three dealt with 'sample design and estimation procedure' and 'conceptual framework' respectively. Section four exhaustively dealt with the demographic characteristics, and level and pattern of household consumer expenditure in Delhi. Detailed statistical tables are given in section five.

SECTION TWO

Sample Design & Estimation Procedure

The period of survey of the 60th round was of six months duration starting on 1st January 2004 and ending on 30th June 2004. The survey period of this round had been divided into two sub-rounds of three months duration each as follows:

sub-round 1 : January - March 2004

sub-round 2 : April - June 2004

In these two sub-rounds equal numbers of sample FSUs (villages/blocks) had been allotted for survey with a view to ensuring uniform spread of sample FSUs over the entire survey period. Attempt had been made to survey each of the FSUs during the sub-round to which it was allotted.

SCHEDULES OF ENQUIRY:

During this round, the following schedules of enquiry were canvassed:

Schedule 0.0	: list of households
Schedule 1.0	: consumer expenditure
Schedule 10	: employment and unemployment
Schedule 25.0	: morbidity and health care

Two different types of the Schedule 1.0 viz. Schedule Type 1 and Schedule Type 2 were canvassed in this round. Schedule Type 1 was the same as Schedule 1.0 used for the last few rounds whereas schedule Type 2 had a different reference period (last 7 days) for some selected items of food, pan, tobacco and intoxicants as compared to 30 days for Schedule Type 1. Both Schedule Type 1 and Schedule Type 2 had been canvassed in each FSU.

SAMPLE DESIGN

Outline of sample design: A stratified multi-stage design had been adopted for the 60th round survey. The first stage units (FSU) were the 1991 Census villages in the rural sector and Urban Frame Survey (UFS) blocks in the urban sector. The ultimate stage units (USU) were households in both the sectors. In case of large villages/blocks requiring hamlet-group (hg)/sub-block (sb) formation, one intermediate stage was the selection of two hgs/sbs from each FSU.

Sampling Frame for First Stage Units: For the rural sector, the list of Census 1991 villages constituted the sampling frame. For the urban sector, the list of latest available Urban Frame Survey (UFS) blocks had been considered as the sampling frame.

STRATIFICATION

Rural sector: Two special strata were formed at the State/ UT level, viz.

Stratum 1: all FSUs with population between 0 to 50 and

Stratum 2: FSUs with population more than 15,000 as per census 1991.

Special stratum 1 had been formed if at least 50 such FSUs were found in a State/UT. Similarly, special stratum 2 had been formed if at least 4 such FSUs were found in a State/UT. Otherwise, such FSUs were merged with the general strata.

From FSUs other than those covered under special strata 1 and 2, general strata were formed and their numbering started from 3. Each district of a State/UT was normally treated as a separate stratum. However, if the census rural population of the district was greater than or equal to 2.5 million as per Population Census 2001 or 2 million as per Population Census 1991, the district had been split into two or more strata, by grouping contiguous tehsils to form strata.

Urban sector: In the urban sector, strata were formed on the basis of size class of towns as per Population Census 2001.

stratum 1 : all towns with population less than 50,000

stratum 2 : all towns with population 50,000 or more but less than 2 lakhs

stratum 3 : all towns with population 2 lakhs or more but less than 10 lakhs

stratum 4, 5, 6,...: each town with population 10 lakhs or more

Allocation to strata: Within each sector of a State/UT, the respective sample size had been allocated to the different strata in proportion to the stratum population as per Census 2001. Allocations at stratum level were adjusted to a multiple of 4 with a minimum sample size of 4.

Selection of FSUs: FSUs were selected with Probability Proportional to Size With Replacement (PPSWR), size being the population as per Population Census 1991 in all the strata for rural sector except for stratum 1. In stratum 1 of rural sector and in all the strata of urban sector, selection was done using Simple Random Sampling Without Replacement (SRSWOR). Within each stratum, samples had been drawn in the form of two independent sub-samples in both the rural and urban sectors.

Criterion for hamlet-group/sub-block formation: Large villages/blocks having approximate population of 1200 or more were divided into a suitable number (denoted D) of 'hamlet-groups' in the rural sector and 'sub-blocks' in the urban sector as stated below.

approximate present population of the sample village/block	no. of hgs/sbs to be formed (D)
less than 1200	1 (no hamlet-groups/sub-blocks)
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
3000 to 3599	6
.....and so on	

Two hamlet-groups/sub-blocks were selected from a large village/UFS block, wherever hamlet-groups/sub-blocks were formed, by SRSWOR. Listing and selection of the households were done independently in the two selected hamlet-groups/sub-blocks.

Formation of Second Stage Strata and allocation of households and schedule types

All the households in the selected village/block/hamlet-groups/sub-blocks were stratified into two second stage strata (SSS) on the basis of land possessed by household in rural areas and household MPCE in urban areas. For rural sector, a cut-off point 'X' (0.05 hectares) was determined for Delhi on the basis of NSS 48th round data in such a way that top 20% of the rural households possessed land equal to or more than X. All the listed households possessing land less than X were in SSS 1. Rest of the households were in SSS 2. Similarly, in the urban sector, a cut-off point 'A' (Rs 1902) had been determined on the basis of NSS 55th round data in such a way that top 20% of the households had MPCE equal to or more than 'A'. All the listed households with MPCE less than 'A' were in SSS 1 while the rest of the households were in SSS 2.

Composition of SSS with number of households to be surveyed for was as follows:

SSS	composition of SSS	number of households to be surveyed	
		without hg/sb formation	with hg/sb formation (for each hg/sb)
rural			
SSS 1:	households with land possessed <X	2	1
SSS 2:	other households	2	1
urban			
SSS 1:	households with MPCE < A other	2	1
SSS 2:	households	2	1

Selection of households: From each SSS the sample households were selected by SRSWOR.

ESTIMATION PROCEDURE**Notations:**

s = subscript for s-th stratum

m = subscript for sub-sample (m =1, 2)

i = subscript for i-th FSU [village (panchayat ward) / block]

d = subscript for a hamlet-group/sub-block (d = 1, 2)

j = subscript for j-th second stage stratum in an FSU/ hg/sb

k = subscript for k-th sample household under a particular second stage stratum within an FSU/ hg/sb

D = total number of hg's/sb's formed in the sample village (panchayat ward) / block

D* = 1 if D = 1 = D / 2 for FSUs with D > 1

N = total number of FSUs in rural stratum 1 or in any urban stratum

Z = total size of a rural stratum other than stratum 1 (= sum of sizes for all the FSUs of a rural stratum other than stratum 1)

z = size of sample village used for selection.

n = number of sample village / block surveyed including zero cases but excluding casualty for a particular sub-sample and stratum.

H = total number of households listed in a second-stage stratum of a hamlet-group/sub-block of sample FSU

h = number of households surveyed in a second-stage stratum of a hamlet-group/sub-block of sample FSU

x, y = observed value of characteristics x, y under estimation

X̂, Ŷ = estimate of population total X, Y for the characteristics x, y

Formulae for Estimation of Aggregates for a particular Sub-sample and Stratum in Rural / Urban sector:**Rural:**

(a) Estimation formula for stratum 1:

i) For households selected in j-th second stage stratum(j=1,2):

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} D_i^* \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

(b) Estimation formula for other strata:

i) For households selected in j-th second stage stratum:

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} D_i^* \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

Urban:

(a) Estimation formula for a stratum:

(i) For households selected in j-th second stage stratum(j=1,2):

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} D_i^* \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

Overall Estimate for Aggregates:

Overall estimate for aggregates for a stratum (\hat{Y}_s) based on two sub-samples is obtained as:

$$\hat{Y}_s = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{sm}$$

Overall Estimate of Aggregates at State/UT:

The overall estimate \hat{Y} at the State/ UT level is obtained by summing the stratum estimates \hat{Y}_s over all strata belonging to the State/ UT.

SECTION THREE

CONCEPTUAL FRAMEWORK

The concepts and definitions adopted during the NSS 60th round are explained in this section.

HOUSE: Every structure, tent, shelter, etc., is a house irrespective of its use. It may be used for residential or non-residential purpose or both or even may be vacant.

HOUSEHOLD: A group of persons normally living together and taking food from common kitchen constitute a household. The word 'normally' means that the temporary visitors are excluded but temporary stay-aways are included. Thus a son or daughter residing in hostel for studies is excluded from household of his/her parents, but a resident employee or resident servant or paying guest (but just not a tenant in the house) is included in the employers/host's household. 'Living together' is usually given more importance than 'sharing food from a common kitchen' in drawing the boundaries of a household. In case the two criteria are in conflict; however in special case of person taking food with his family but sleeping elsewhere (say, in shop or a different house) due to space shortage, the household formed by such a person's family members is taken to include the person also. Each inmate of mess, hotel, boarding house, etc. is considered as single member household but a family living in a hotel is considered to be one household only; the same applies to residential staff of such establishments.

HOUSEHOLD SIZE: The number of normally resident members of a household is its size. It will include temporary stayaways but exclude temporary visitors and guests.

HOUSEHOLD CONSUMER EXPENDITURE: The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure. The household consumer expenditure is the total of the monetary value of consumption of various groups of items namely:

- i) food, pan(betal leaves), tobacco, intoxicants and fuels and light.
- ii) clothing and footwear; and
- iii) miscellaneous goods and services and durable articles.

For group (i) and (ii), the total value of consumption is derived by aggregating the monetary value of goods actually consumed during the reference period. An item of clothing and footwear would be considered to have been consumed if it is brought into maiden or first use during reference period, The consumption may be out of :

- a) purchase made during the reference period or earlier.
- b) home grown stock.
- c) receipt in exchange of goods and services.
- d) any other receipt like gift, charity, borrowings; and
- e) free collection.

For evaluating the consumption of the items of group (iii) i.e. items categorised as miscellaneous goods and services and durable articles, a different approach is followed, In this case, the value of actual purchase i.e., the expenditure made during the reference period for the purchase of goods and services is considered as consumption.

It is pertinent to mention here that the consumer expenditure for a household on food items relate to the actual consumption made by the normal resident member of the household and also by the guests during the ceremonies otherwise. To avoid double counting, transfer payments like charity, loan advances, etc. made by the households are not considered as consumption for items of groups (i) and (ii), since transfer receipts of these items have been taken into account. However, the item "cooked meals" is an exception to the rule. Meals prepared in that household kitchen and provided to the employees and/or other would automatically get included in domestic consumption of employer (payer) household. There is a practical difficulty of estimating the quantities and values of individual items used for preparing the meals served to the employees or the others. Thus, to avoid double counting, cooked meals received, as perquisites from employer household or as gift or charity are not recorded in the recipient household. As a general principle, cooked meals purchased from the market for the consumption of the normal resident members and for the guest and employees will also be recorded in the purchaser household.

This procedure of recording cooked meals served to others in the expenditure of serving households only leads to bias free estimates of average per capita consumption as well as total consumer expenditure. However, as the proportions of donors and recipients of free cooked meals are likely to vary in opposite direction over the expenditure classes, the nutritional intake derived from the consumer expenditure survey data may present a somewhat distorted picture. These derived nutrition intakes may get inflated for the rich (net donors) and somewhat understated for the poor (net recipients). This point has to be kept firmly in mind while using the NSS consumer expenditure data for any nutritional studies.

TOTAL HOUSEHOLD EXPENDITURE: The total household expenditure is composed of expenditure of the household on broad group of items. The groups are:

- (1) Cereals
- (2) Gram
- (3) Cereals substitutes
- (4) Pulses & pulse products
- (5) Milk & Milk Products
- (6) Edible Oil
- (7) Meat, Egg and Fish
- (8) Vegetables
- (9) Fruits (Fresh and dry)
- (10) Sugar
- (11) Salt
- (12) Spices
- (13) Beverages, refreshments and processed food
- (14) Pan, tobacco and intoxicants

- (15) Fuel and light
- (16) Clothing
- (17) Footwear
- (18) Miscellaneous goods and services
- (19) Durable goods
- (20) Rent
- (21) Taxes and cesses
- (22) Medical: (institutional and non-institutional)
- (23) Education

The results of total household consumer expenditure expressed are broadly classified under (a) Food total and (b) Non-food total.

VALUE OF CONSUMPTION: Consumption out of purchase is evaluated at the purchase price. Consumption out of home produce is evaluated at ex factory prices. Value of consumption out of gifts, loans, free collection and goods received in exchange of goods and service is imputed at the rate of average local retail prevailing during the reference period.

MONTHLY PER CAPITA CONSUMER EXPENDITURE (MPCE) : For a household, this is its 30 day's consumer expenditure divided by its size. A person's MPCE is understood as that of the household to which he or she belongs.

REFERENCE PERIOD: The reference periods used for collection of consumption data for different groups of items are given below:-

- Food, pan, tobacco and intoxicants, fuel & light, Miscellaneous goods & services, and medical care (non-institutional) – last 30 days
- Education, medical care (institutional), clothing footwear and durable goods – last 365 days

MILK AND MILK PRODUCTS: This includes ghee, butter, curd, ice-cream etc. Milk-based sweetmeats (pera, rasogolla etc.) come under “beverages, refreshments and processed food”. However, if these are prepared from milk, sugar, etc. within the household and consumed, then the consumption of ingredients are accounted separately instead of the entire consumption being accounted under “milk products”. Clothing and footwear: This category includes bed sheets, bedcovers, pillows, curtains, mattresses, blankets, rugs, mats and mattings, cotton yarn, wool and knitting wool. It, however, excludes tailoring charges, which come under “miscellaneous goods and services”.

MISCELLANEOUS GOODS AND SERVICES: This is a residual group containing items other than goods, pan, tobacco, intoxicants, fuel and light, clothing, footwear, rent, taxes and durable goods.

INSTITUTIONAL AND NON-INSTITUTIONAL MEDICAL EXPENSES: The distinction between institutional and non-institutional medical expenses lies in whether the expenses were incurred for medical treatment undergone as an in-patient of a medical institution (such as a hospital or nursing home) or otherwise. Medical expenses include expenditure on medicines and medical goods including family planning appliances, payment made for medical treatment, and expenses incurred for clinical tests.

DURABLE GOODS: Items included here are distinguished from miscellaneous goods by having a longer expected lifetime of use (roughly, one year or more). Expenditure incurred on repairs and construction of durable used for domestic purpose is included in 'expenditure on durable goods'.

PUCCA STRUCTURE: A pucca structure is one whose walls and roof are made of pucca materials as cement, concrete, oven burnt bricks, hollow cement / ash bricks, stone, stone blocks, jack boards (cement plastered reeds), iron, zinc or other metal sheets, timber, tiles, slate, corrugated iron, asbestos cement sheet, veneer, plywood, artificial wood of synthetic material and ploy vinyl chloride(PVC) material.

KATCHA STRUCTURE: A structure, which has walls and roof made of non-pucca materials, is regarded as a katcha structure. Non-pucca materials include unburnt bricks, bamboo, mud, grass, leaves, reeds, thatch, etc. Katcha structures can be of the following two types:

UNSERVICEABLE KATCHA STRUCTURE includes all structures with thatch walls and thatch roof i.e. walls made of grass, leaves, reeds, etc. and roof of a similar material and

SERVICEABLE KATCHA STRUCTURE: includes all Katcha structure other than Unserviceable Katcha structure.

SEMI-PUCCA STRUCTURE: A structure, which cannot be classified as a pucca, or a katcha structure as per definition is a semi-pucca structure. Such a structure will have either the walls or the roof but not both, made of pucca materials.

BUILDING: Building is a free-standing structure comprising one or more rooms or other spaces covered by a roof and usually enclosed within external walls or dividing walls which extend from the foundation to the roof. Dividing walls refer to the walls of adjoining buildings, i.e. dividing walls of a row of houses. These houses are practically independent of one another and likely to have been built at different times and owned by different persons. If more than one physically separated structure constitute one living unit, all of them together also form a building. Usually, building will have four external walls. But in some areas the nature of building construction is such that it has no walls. Instead, it has a roof, which almost touches the ground, and it is provided with entrance. Such structures and also

structures standing only on pillars will also be treated as building for the purpose of the survey.

DWELLING UNIT: It is the accommodation availed of by a household for its residential purpose. It may be an entire structure or a part thereof or consisting of more than one structure. There may be cases of more than one household occupying a single structure such as those living in independent flats or sharing a single housing unit, in each case, there will be as many dwelling units as the number of households sharing the structure. There may also be cases of one household occupying more than one structure (i.e. detached structures for sitting sleeping, cooking, bathing etc) for its housing accommodation. In this case, all the structure together constitutes a single dwelling unit. In general, a dwelling unit consists of living room, kitchen, store, bath, latrine, garage, open and closed veranda etc. A structure or a portion thereof used exclusively for non-residential purposes or let out to other households does not form part of the dwelling unit of the household under consideration. However, a portion of a structure used for both residential and non-residential purposes is treated as part of the dwelling unit except when the use of such portion for residential purpose is very nominal. The dwelling unit covers all pucca, semi-pucca and katcha structures used by a household. Households living more or less regularly under bridges, in pipes, under staircase, in purely temporary flimsy improvisations built by the road side (Which are liable to be removed at any moment) etc., are considered to have no dwelling.

CHAWL/BUSTEE: A chawl/bustee is a collection of huts (thatched houses) or tenements which is generally constructed of katcha or semi-pucca materials like mud, bamboo, grass, leaves, reeds, thatch, unburnt bricks etc., and is inhabited by a large number of households.

INDEPENDENT HOUSE: An independent house is one, which has a separate structure and entrance with self-contained arrangements. In other words, if the dwelling unit and the entire structure of the house are physically the same, it should be considered as an independent house. In some parts, particularly in rural areas, two or more structures together may constitute a single housing unit. While the main residence may be in one of the structures, the other structures may be used for sleeping, sitting and for store, bath etc. In all such cases, all the structures together will form a single housing unit and will be treated as an independent house.

FLAT: A flat, generally, is a part of the building and has one or more rooms with self-contained arrangement and normal housing facilities like water supply, latrine, toilet, etc., which are used exclusively by the household residing therein or jointly with other households. It also includes detached room or rooms with or without other housing facilities.

ECONOMIC ACTIVITY: Any activity resulting in production of goods and services that add value to national product was considered as an economic activity. Such activities included production of all goods and services for market (i.e. production for pay or profit) and non market activities such as production of primary commodities

for own consumption and own account production of fixed assets. Activities like prostitution, begging, smuggling etc., which though fetched earnings were, by convention, not considered as economic activities.

SELF-EMPLOYED: Persons who operated their own farm or non-farm enterprises or were engaged independently in a profession or trade on account or with one or a few partners were deemed to be self-employed in household enterprises. The essential feature of the self-employed is that they have *autonomy* (i.e. how, where and when to produce) and *economic independence* (i.e. marker, scale of operation and money) for carrying out their operation. The fee or remuneration received by them comprised two parts – share of their labour and profit of the enterprise. In other words, their remuneration was determined wholly or mainly by sales or profits of the goods or services which were produced.

Categories of Self-employed persons: Self-employed persons were categorised as follows:

- a) **Own-account workers:** those self-employed persons who operated their enterprises on their own-account or with one or a few partners and who, during the reference period, by and large, ran their enterprise without hiring any labour. They could, however, have had unpaid helpers to assist them in the activity of the enterprise.
- ii) **employers:** those self-employed persons who worked on their own-account or with one or a few partners and, who, by and large, ran their enterprise by hiring labour, and
- iii) **helpers in household enterprise:** those self-employed persons (mostly family members) who were engaged in their household enterprises, working full or part time and did not received any regular salary or wages in return for the work performed. They did not run the household enterprise on their own but assisted the related persons living in the same household in running the household enterprise.

REGULAR SALARIED/WAGE EMPLOYEE: These were persons who works in other's farm or non-farm enterprises (both household and non-household) and , in return, received salary or wages on a regular basis (i.e. not on the basis of daily or periodic renewal of work contract). This category included not only persons getting time wage but also persons receiving piece wage or salary and paid apprentices, both full time and part time.

CASUAL WAGE LABOUR: A person who was casually engaged in other's farm or non-farm enterprises (both household and non-household) and in return, received wages according to the terms of the daily or periodic work contract, was a casual wage labour.

SECTION FOUR

SUMMARY FINDINGS

This section is devoted to the analysis of results of household consumer expenditure survey held during January – June 2004. The main focus is on level and pattern of consumer expenditure of households in Delhi. Besides, certain selected demographic features, indicators of living of population and employment-unemployment situation were also discussed. The estimates are based on 64 rural and 765 urban sample households.

4.1 DEMOGRAPHIC FEATURES

and the sex ratio comes to 822 females for thousand males.

Statement 4.1.1: Distribution of households/Population

Sector	Estimated Households	Estimated Population			Household Size
		Male	Female	Total	
Rural	202791	566970	464760	1031730	5.09
Urban	3072272	7736030	6360240	14096270	4.59
Delhi	3275063	8303000	6825000	15128000	4.62

Statement 4.1.2 gives the distribution of population Monthly Per Capita Expenditure (MPCE) class-wise. In rural areas 40.28% of population were in the highest MPCE class namely Rs.950 and above; 15.02% were in Rs.775-950 class and 22.73% in Rs.615-775 MPCE class. On the other hand in the urban areas 25.47% of population were in the MPCE class of Rs. 1925 and above, 11.00% in the Rs.1500-1925 class, 17.21% in Rs. 1120-1500 class, 10.23% in the Rs. 915-1120 Class and 10.52% in Rs. 775-915 MPCE Class. At the state/UT level it was observed that more than 73.12% of the population was in the MPCE class of Rs.775 and above.

FEMALE-HEADED HOUSEHOLDS:

There has been a demand for bringing out data on women related parameters both at national and state level. Accordingly data was generated on female-headed households in Delhi. The survey indicated that only 10.76% of the total families in

Delhi are having female as head of the household thereby showing an increase by more than 3.58 % points over the previous round.

Statement 4.1.5: Distribution of Households by Gender of Head of the Family

Sector	Number of Households			
	Male as Head	Female as Head	%age of Female Headed Households to Total	Total
RURAL	196129	6662	3.29	202791

DELHI	2922768	352295	10.76	3275063

MARITAL STATUS:

Information on marital status was obtained through female approach during the survey. The outcome of the survey is that out of the total female population

48.72% were currently married, 7.06% widowed and only 0.45% were

divorced/separated.

The proportion of female population in the category of never married was 43.77%. Statement 4.1.5 provides age group-wise position of marital status in Delhi. In the age group 15 to 19 years, 89.74% of the females were in the category 'never

married' while the remaining 10.26% were 'currently married'. It has been observed that, as the age-group is progressing the proportion of female with status 'never married' is decreasing while that of 'currently married' is increasing. While in the age group 60 and above, about 43.87% females were currently married and 56.13% were widowed.

5	Maize	0.03	0.28	0.01	0.04
6	Other Cereals	0.00	0.16	0.00	0.05
7	Total Cereals	11.02	12.42	11.04	10.03

MPCE in respect of major states including Delhi is given in statement 4.3.6. The data of other states pertains to central sample. It may be noted from the statement that Delhi topped in rural as well as urban areas among States/UT's. This signifies the prevalence of relatively better levels of living standards in Delhi when compared to other states.

Statement 4.3.6: MPCE - State-wise

S.No.	State/UT	Monthly Per Capita Expenditure (Rs.)	
		Rural	Urban
1.	Andhra Pradesh	557.11	1101.71
2.	Arunachal Pradesh	702.06	NA

OFFTAKE FROM PDS & OTHER SOURCES

The popularity of PDS can be measured in terms of the proportion of purchases made from PDS vis-à-vis open market. During the survey, data on off take from PDS and other sources was collected in respect of certain selected items of daily use. Statement reveals that out of the total quantity of wheat/atta purchased nearly 2.48% is from PDS and 97.52% from open market. In case of Kerosene the percentage of purchase made from PDS was 22.66%. Sugar is being distributed to the BPL card holder only at present.

Statement 4.3.8. : Off-take from Public Distribution System and Other Sources in Delhi (Quantity Percentage)

Item	Percentage (Quantity)					
	RURAL		URBAN		DELHI	
	From PDS	From Other Sources	From PDS	From Other Sources	From PDS	From Other Sources
Rice	0.00	100.00	2.33	97.67	2.00	98.00
Wheat/ Atta	1.50	98.50	2.67	97.33	2.48	97.52
Kerosene	0.00	100.00	27.36	72.64	22.66	77.34

4.4 COMPARISION OF KEY FINDINGS

Selected findings of Central and State Samples are presented along with sample households covered in statement 4.4.1 Rural sample results in central sample have not been published separately hence the comparison is not feasible. The important indicators of the survey, namely estimated population, households, household size, household consumer expenditure and per capita monthly consumption of cereals were by and large found to be comparable in both sets of data.

Statement 4.4.1: Comparison of Key Results of Central & State Sample

S.No	Item	Number	
		Rural	Urban

2	Central Sample (Delhi)	N.A	8.92
3	State Sample (Delhi)	11.02	11.04

SECTION FIVE

NOTE ON STATISTICAL TABLES

ESTIMATED POPULATION:

The estimated population of Delhi as per survey was 11643295 persons during as against population projections available from Registrar General of India as on 1st March 2004 was 15128000.

Statement 5.1: Estimated Survey Population & Households

Item	Rural		Urban	
	Male	Female	Male	Female
Survey Population	1049321	818887	5310059	4465028
RGI Population Projections (As On 1st July, 2003)	566970	464760	7736030	6360240
Adjustment Factor	0.5403208	0.5675508	1.4568633	1.4244569
Household (Survey)	367205		2130473	
Household (Projected)	202791		3072272	
Adjustment Factor	0.5522555207		1.44206098833	

Comparison of survey population with projected RGI population was made (as on 01.03.2004) to ascertain the discrepancies, if any, between the two sets of data. Sample survey estimates were found to be on the lower side in urban and on higher side in rural for obvious reasons. For the benefit of data users adjustment factor was worked out and presented in the statement 5.1. This is to be applied in respect of rural (deflated) and urban (inflated) aggregates to get the data comparable with RGI's population projections. However these adjustment factors have already been applied while presenting the data in all the statements under section 4 of this report.
