PREFACE

The "Price Indices in Delhi-2020-21" is the revised and updated edition of the earlier publication prepared by this Directorate. The publication incorporates the time series of different Price Indices such as CPI for Industrial Workers, CPI Combined and Wholesale Price Index (WPI). Efforts have been made to incorporate latest data in this publication. The Publication has been prepared with a view that these indices are available at one place for reference as and when required.

A Consumer Price Index (CPI) is designed to measure the changes over time in general level of retail prices of essential selected goods and services that households purchase for the purpose of consumption. Such changes affect the real purchasing power of consumers' income and their welfare. The Consumer Price Index Numbers for Industrial Workers CPI (IW) are being compiled, maintained and disseminated by the Labour Bureau since its inception in October, 1946. These index numbers are being utilized for fixation and revision of wages and determination of variable Dearness Allowances payable to workers in organized sectors of the economy. Despite the coverage being limited to Industrial Workers, presently, the CPI(IW) are also utilized as an indicator for measuring inflationary trend in the country and for policy formulations. The Labour Bureau, Ministry of Labour & Employment, Shimla has replaced the old series of Base Year 2001=100 with the new series of Base Year 2016=100 w.e.f. Sept. 2020. The National Statistics Office (NSO), Ministry of Statistics and Programme Implementation has revised the Base Year of the Consumer Price Index (Combined) from 2010=100 to 2012=100 with effect from the release of indices for the month of January 2015. The Office of the Economic Adviser in the Department of Industrial Policy and Promotion, Ministry of Commerce & Industry is responsible for compiling WPI and releasing it. Latest revision of WPI has been done by shifting base year from 2004-05 to 2011-12.

The strenuous efforts put in by the officers / officials of the Price & Coordination Unit of the Directorate of Economics & Statistics, Delhi are highly appreciated to bring out this report.

I hope this report will be of immense help to the policy makers, Planners and Research Scholars interested in the study of Price trends in Delhi and at National level.

Constructive comments and suggestions, if any, for improving the future publications are most welcome.

DELHI
November, 2021

5.2 Group -wise Consumer Price Index numbers for industrial workers in Delhi (Annual Average) during(2007-2019)	64
5.3 State/Centre wise Consumer Price Index numbers for industrial workers of All India. (Base Year 2001=100) from year 2012 to 2019	65-67
5.4 Consumer Price Index numbers for industrial workers of Metro-cities & All India 2002-2019 (Base Year 2001=100)	68
5.5 Month & Year wise Consumer Price Index numbers for industrial workers of All India General Index. (Base year 1982=100 and 2001=100)	69
5.6 Group wise Consumer Price Index numbers for Industrial workers of all India. (Base year 1982=100 and 2001=100)	70
ANNEXURE	71-82

Report on “Price Indices 2020-21”

(Based on CPI (Industrial Workers) with base year 2016)

HIGHLIGHTS

General Index:

During 2020-21, CPI (IW) was increased by 5% at All India level while it was 4.6% in Kolkata followed by Chennai (4.4%), Mumbai (4.1%) and Delhi (3.0%).

Food & Beverages Group:

In Food & Beverages Group, Kolkata recorded the highest increase (7.4%) in 2020-21 while Delhi recorded lowest increase of 4.1% in 2020-21. At All India level, an increase of 5.7% was recorded in this group.

Pan, Supari, Tobacco & Intoxicants group:

In Pan, Supari, Tobacco & Intoxicants group, Chennai has highest increase of 19.5% while lowest increase of 2.4% was observed in case of Kolkata. At All India level, an increase of 6.3% was recorded during 2020-21.

Clothing & Footwear group:

Clothing & Footwear group exhibited highest increase in case of Delhi (3.4%) while lowest increase was observed in Mumbai (1.2%), whereas decrease was noticed in case of Chennai (1.4%). At All India level, an increase of 2.3% was recorded during 2020-21.

Housing group:

Housing group indicated highest increase in case of Mumbai (8.3%), while lowest increase was observed in Chennai (1.5%). For Delhi it was 3.9% while at All India level it was increased by 5.2% during 2020-21.

Fuel & Light Group:

In Fuel & Light Group, 4.3% increase was observed in case of Kolkata, which is the lowest amongst Metro cities. Highest increase was noticed in case of Chennai (16.2%), whereas decrease was noticed in case of Delhi (13.7%), while at all India level an increase of 9.5% is observed during 2020-21.

Miscellaneous Group:

In Miscellaneous Group (consists of items falling under the categories of medicines, medical services, education services, stationery, recreation, transport and communication, personal care effects, household requisites and other services viz. hair cutting, tailoring etc), the highest increase was noticed in case of Chennai (2.6%) followed by Delhi (2.4%), Kolkata (0.4%) whereas decrease was noticed in case of Mumbai (1.0%). At all India level 2.7% increase was observed in Misc. Group during 2020-21.

Price trends of Consumer Price Index (IW) in Major Cities/centres for the Year 2020-21:

Among the selected major cities/centres (i.e Delhi, Mumbai, Kolkata, Chennai, Bengluru, Hyderabad, Jaipur, Indore, Faridabad, Ghaziabad, Bhopal, Chandigarh, Varanasi, Amritsar & Lucknow) Delhi has lowest average Consumer Price Index (IW) and Kolkata has highest CPI (IW) for the year 2020-21.

CHAPTER 1

INTRODUCTION

A Consumer Price Index (CPI) is designed to measure the changes over time in general level of retail prices of selected goods and services that households purchase for the purpose of consumption. Such changes affect the real purchasing power of consumer's income and their welfare. The CPI measures price changes by comparing, through time, the cost of a fixed basket of commodities. The basket is based on the expenditures of a target population in a certain reference period. Since the basket contains commodities of unchanging or equivalent quantity and quality, the index reflects only pure price. Traditionally, CPI numbers were originally introduced to provide a measure of changes in the living costs of workers, so that their wages could be compensated to the changing level of prices. However, over the years, CPIs have been widely used as a macroeconomic indicator of inflation, and also as a tool by Government and Central Bank for targeting inflation and monitoring price stability. CPI is also used as deflators in the National Accounts. Therefore, CPI is considered as one of the most important economic indicators.

Given the many uses of CPIs, it is unlikely that one index can perform equally satisfactory in all applications. Therefore, there is a practice of compiling several CPI variants for specific purpose. Each index should be properly defined and named to avoid confusion. The purpose of CPI should influence all aspects of its construction.

In India, segment specific CPIs, namely CPI (IW), CPI (AL), CPI (RL) are being compiled regularly, catering to the need of specific population

group. CPI (UNME), which has been discontinued w.e.f. December 2010, was meant for urban non-manual employees. All these above-mentioned indices depict change in the level of average retail prices of goods and services consumed by specific segment of population, which they refer.

The price index is an indicator of the average price movement over time of a fixed basket of goods and services. The constitution of the basket of goods and services is done keeping in to consideration whether the changes are to be measured in retail, wholesale or producer prices etc. The basket will also vary for economy- wide, regional, or sector specific series. At present, separate series of index numbers are compiled to capture the price movements at retail and wholesale level in India. There are four main series of price indices compiled at the national level. Out of these four, Consumer Price Index for Industrial Workers (CPI- IW) and Consumer Price Index for Agricultural Labourers / Rural Labourers (CPI - AL/ RL), are consumer price indices. The Wholesale Price Index (WPI) number is a measure of wholesale price movement for the economy.

The concept of wholesale price has hitherto covered the general idea of capturing all transactions carried out in the domestic market. The weights of the WPI do not correspond to contribution of the goods concerned either to value- added or final use. In order to give this idea a more precise definition, it was decided to define the universe of the wholesale price index as comprising as far as possible all transactions at first point of bulk sale in the domestic market.

Consumer Price Index for Industrial Workers

The old series of CPI-IW was with base year 2001=100 covered 78 centres spread across the country. To capture the latest consumption pattern of working class families, the Labour Bureau had conducted the base revision exercise of CPI-IW to update the base year of the old series of CPI-IW (2001=100) to the base 2016=100. The main objective of the exercise is to bring out the new series of All-India and individual centre-wise Consumer Price Indices for Industrial Workers based on the latest consumption pattern of the target population, industrial workers in instant case.

The following are the key features of the old series of CPI-IW with base year 2001=100:

- The old series of CPI-IW on base 2001=100 was compiled for 78 selected centres in the country. The All-India Consumer Price Index for Industrial Workers was the weighted average of these 78 centre indices.
- The Centre-wise Weighting Diagrams for the Index have been derived from the results of Working Class Family Income and Expenditure Surveys conducted during 1999-2000 in all the 78 selected centres.
- The present system of price collection passes through three tier scrutiny- at the first tier, the prices collected by the price collectors are scrutinized by the Price Supervisors who are middle level officers of the State Government working in same department - at the second stage prices are scrutinized by the Officers of the Regional Offices of the Labour Bureau and at the third tier they are scrutinized by the Officers at Head Quarter. These price data, after cleaning them for conceptual/factual errors at various levels, are utilised for the compilation of index numbers.
- Housing group index is compiled by following the Chain Base method, in which rent movements are compared with the last six monthly period and not with the base period. Rent index is calculated once in every six months viz., Jan. and July and kept constant for the following five months.

- The index is compiled by using Laspeyres base weighted formula. The indices are compiled on monthly basis with a time lag of one month and are released through website, Press Note, Monthly Index letter and Indian Labour Journal.

From the above account, it may be mentioned that broad features of old series (2001=100) have been retained under the new series with base 2016=100 as well, however, following are the improvements in the updated series of the CPI-IW with base 2016=100:

- Under updated series, the number of States/UTs have been increased from 25 to 28 States/UTs.

- Under revised series, the coverage of centres has been increased from 78 centres to 88 centres across the country. Out of these 88 centres, 65 centres are common and 23 are new centres.

- Under updated series, the coverage of markets has also been increased from 289 markets under old series to 317 markets across the country.

- Under revised series, the sample size has also been increased from 41040 working class families to 48384 during the main survey across the 88 centres.

- As per the direction of Technical Advisory Committee (TAC) on Statistics of Prices and Cost of Living (SPCL) the Classification of Individual Consumption by Purpose (COICOP) method for grouping & sub-grouping of consumption items, is being used for derivation of weighting diagrams under new series.

- Under the new series 2016=100, as per the direction of Technical Advisory Committee (TAC) on Statistics of Prices and Cost of Living (SPCL), the Geometric mean based methodology (using the GM of Price relative) is being used for compilation of indices instead of Arithmetic mean being used in old series 2001=100.

The Groupwise Weights (Base year 2001=100 and Base year 2016=100) of Consumer price Index for industrial worker CPI (IW) in r/o Delhi Centre are as under:-

	Group	Weights Base Year (2001=100)	Weights Base Year (2016=100)
1	Food & Beverages (Food Group)*	43.75	36.13
2	Pan, Supari, Tobacco & Intoxicants	2.12	0.84
3	Fuel & Light	5.39	7.05
4	Housing	20.72	24.29
5	Clothing & Footwear (Clothing, Bedding & Footwear)*	5.68	5.43
6	Miscellaneous	22.34	26.26
	General Index	100.00	100.00

*Group Name-under old series with base year (2001=100)

The group level weights under new series (2016=100) and old series of CPI-IW (2001=100) are depicted in above charts. It may be observed that the weight of Food & Beverages (earlier Food group) is declining whereas the weight of Miscellaneous group comprising as Medical care, Education, Recreation and Amusement , Transport & communication , Personal Care and effects, other Miscellaneous Items is rising under CPI-IW (2016=100) vis-à-vis CPI-IW (2001=100).

Linking Factor: On the introduction of revised series, it is essential to provide a linking factor between the old series and the revised series so that the new series, when released, may be compared with the outgoing one. Under the 'Arithmetic Conversion method' the linking factor or conversion factor of the two series is worked out by taking the ratio of the averages of old series indices to the new series indices. This method had been adopted for linking 1982 series with 2001 series. Following this approach, the linking factor has been derived by taking the ratio of average of monthly indices of old series to new series for the period of 12 months (from September 2019 to August 2020). The linking factor of Metropolitan cities and all India are given below :

S.No.		Linking Factor
1	All India	2.88
2	Delhi	2.82
3	Mumbai	2.91
4	Chennai	2.50
5	Kolkata	2.46

METHODOLOGY FOR COMPILATION OF CONSUMER PRICE INDEX NUMBERS FOR INDUSTRIAL WORKERS COMPILED BY LABOUR BUREAU , GOVT OF INDIA (BASE : 2016=100)

The main components for constructing consumer price index numbers are the weights and prices. Weights are the share of actual expenditure on each commodity during the base period and base prices are the annual average of item level prices during the 2016 in respect of items retained in the index basket. Following theory of fixity the weights and base prices remains fixed throughout the lifetime of the series and only current period prices are collected on weekly, monthly etc basis to capture the price movement at the market level.

Statistically, index compilation involves two step procedures:

1. In the first step, the elementary price indices or item level indices for the elementary aggregates are calculated by using the "Jevons formula" which uses Geometric Mean of Price Relatives where price relatives are calculated by dividing the current price by base price. These elementary

price indices are used to obtain higher-level indices using the associated expenditure weights during the index compilation.

2. In the second step, these elementary level indices are averaged (aggregated) to calculate the higher level indices using consumption expenditure as weights associated with each level using Laspeyres index formula.

An algebraic form of Laspeyres' index formula can be written as:

$$I_n = \frac{\sum q_0^i p_n^i}{\sum q_0^i p_0^i} \text{-----(1)}$$

Where,

p_n^i = price for i th item at time 'n' (current period)

p_0^i = price for i th item at time '0' (base period)

q_0^i = quantity of i th item purchased during the base period.

which is equivalent to:

$$I_n = \frac{\sum q_0^i p_0^i \times (p_n^i / p_0^i)}{\sum q_0^i p_0^i}$$

$$I_n = \sum (p_n^i / p_0^i) \times w_i \text{-----(2)}$$

Where w_i is the weight assigned to the i^{th} item or share of expenditure for i^{th} item in base period and the expression (p_n^i / p_0^i) is called the Price Relative (PR) which is the ratio of the price of an item in the current period to its price in the base period. Thus, eq. (2) represents the weighted average of the elementary price indices where weights being the expenditure incurred on the i th item in the base period. Under the new series of CPI-IW (2016=100), Labour Bureau has adopted the 'Jevons formula' for compiling indices therefore, in this case p_n and p_0 are the averages (using Geometric Mean) of the prices for the i^{th} item collected from different markets in current period and base period

respectively. Thereafter, GM has been used for averaging the price relatives of i^{th} item across all markets in a given centre.

Rationale for using Jevons Index formula for elementary price index:

The Laspeyres index formula has been used for index compilation because of its inherent practical advantages. In old series with base 2001=100, the arithmetic mean of price relative has been used for compilation of indices. However, as per the direction of Technical Advisory Committee on Statistics of Prices and Cost of Living (TAC on SPCL) during its meeting held on 22.10.18, New Delhi, Labour Bureau has used the Geometric Mean of price relative (Jevons formula) instead of Arithmetic Mean for compiling indices under new series. It may be noted that the Geometric Mean of price relative (Jevons formula) is less influenced by extreme prices than the ratio of arithmetic mean prices and hence, the elementary price indices are less volatile in nature. Moreover, the Jevons approach satisfies the axioms or statistical tests like time reversal test, commensurability test and transitivity test.

Construction of All India Index:

The All India index is the weighted average of the 88 centre level indices. The centre weights are being determined as the ratio of product of average consumption expenditure per family as per the main survey and the number of working class families represented by a centre in a State to sum of such products over all the centres. The provisional indices compiled by Labour Bureau were discussed in detail and approved by Technical advisory Committee on Statistics of Prices and Cost of Living Index Number during its 67th meeting held on 28.01.2020. Subsequently, these provisional indices were discussed and deliberated in detail by Securities Trading Corporation during its meeting held on 27.02.2020. The Securities Trading Corporation also gave its concurrence to the methodology of trial indices compiled by Labour Bureau.

Treatment of Seasonal items:

Special care has been taken in case of seasonal items. In case of fruits and vegetables items, month-wise seasonality have been fixed in the base year itself on the basis of their availability in different months of the year i.e. a particular fruit/vegetable is priced during the months it is available in the market in saleable quantity. The seasonality had been determined by examining the availability of price data of various items from markets of the centre. Besides, month-wise expenditure reported on these items during the main survey was also taken into account while finalising the seasonality. The item weights within the vegetables and fruits sub-group of food group vary from month to month on the basis of vegetables and fruit items retained in the index basket for all the 12 months separately of a year. Seasonality once finalised would remain fixed throughout the lifetime of the series.

Treatment of Fair Prices:

Under the Public Distribution System, Government has been supplying some of the essential items to the public at concessional rates and this facility is also available to working class population. For PDS items like Rice, Wheat, Sugar, etc., prices are collected from both open market and PDS shops as these items are purchased by the target population from both the sources. The quantity availed from PDS is as per entitlement of the beneficiary/household which may be less than actual requirement and in that case the remaining quantity is purchased from open market to meet the family's total requirement. It may be noted that the price of PDS items used in index computation is weighted average of open market and PDS prices wherein weight is the proportion of total requirement met from these two sources for targeted beneficiary. For non-targeted beneficiary, only open market prices are used. Thus, in case of PDS items due care has been taken to arrive at weighted price (PDS & Open Market) of the item. With the use of weighted average price of PDS items, the open market prices are appropriately accounted for. For all remaining items under index basket, only open market prices have been used.

Index for Housing Group:

The change in rent and related charges, which constitute a single term under housing group, is captured through Repeat House Rent Survey (RHRS) which is conducted in the form of six monthly rounds. The house rent index is utilized in the compilation of centre level general index and the centre level general indices are utilized in the compilation of a weighted average All-India Index. In the compilation of all-India group indices, a separate all-India Housing group index is also compiled like all other groups such as Food & Beverages; Pan, Supari, Tobacco & Intoxicants; Fuel & Light; Clothing & Footwear; and Miscellaneous.

Objective and Definitions:

The main objective of the Repeat House Rent Survey is to collect data on house rent and related charges from a fixed sample of dwellings, according to a prescribed procedure, in order to measure the changes in rents for a fixed standard accommodation and amenities as revealed through working class family income & expenditure survey. Rent for the sampled dwelling is the price for housing which goes into the index compilation. 'Rent' implies compensation payable to the owner of specified accommodation by the occupant. In case of self-owned dwelling the comparable rent which is the rent paid for the similar rented accommodation in the same building or nearby locality has been taken into account. The comparable rented dwelling may even be occupied by nonworking class family.

Unit: The 'Unit' of the survey is the dwelling (and not the sample worker/family) occupied by the sample family. Thus, the identity of dwelling is important and not the identity of the family. Further, the dwelling must be under occupation of a family of a sample worker belonging to any of the seven sectors of employment being covered under the definition of industrial workers in the Working Class Family Income & Expenditure Survey. Three types of dwellings viz. Rented, Rent Free and Self-owned have been covered across all the centres as is done under the old series with base 2001=100.

Rented dwelling is defined as the entire portion of the residential accommodation hired by the sampled working class family on payment of rent. Rent -free dwelling is defined as the entire portion of the residential accommodation occupied by the sampled family which has been provided by the employer of the sampled worker without charging any rent.

Self -owned dwelling means a residential accommodation of which any member of the family of the worker is an owner and the same is occupied by the family.

Round/Sub-round: The total span of six months to cover all the selected dwellings is known as a round and every month of the round is termed as a sub-round for this survey. All the dwellings covered in a sub-round are surveyed again after an interval of six months in the subsequent round. There are two rounds of the House Rent Survey in a year.

Sector: A set of similar establishments classified by the industrial divisions as per their economic activities are termed as a 'Sector'. Seven sectors covered in the main survey are Factories, Mines, Plantations, Railways, Public Motor Transport Undertakings, Electricity Generating & Distributing Establishments and Ports & Docks.

Weights: In RHRS, the indices in respect of three categories of houses viz. Rented, Self-owned and Rent Free are combined using the weights which are proportions of families residing respectively in the three categories covered during the main working class family income & expenditure survey.

For the purpose of house rent survey, sampled dwellings for a centre are divided into six equal groups and one group is covered in the month. Thus, a group covered in a given month (say, January) will be covered again after six months (i.e. in July). The order of visits to the sampled dwellings is kept same from round to round in order to ensure a gap of six months between two consecutive visits, to each sampled dwelling. Thus a span of six months to cover all the selected dwellings forms a round and every month is termed as a sub- round for this survey. The index for the housing group is revised twice in a year i.e. in January and

July month of every year. The index is calculated once in every six months and is kept constant for the remaining five months of the round on account of the tendency of house rent to remain more or less stable over short periods. The same practice is also followed in the existing series of CPI-IW (2001=100).

During the survey, a sampled dwelling may be found as casualty due to reasons like demolition, utilization of the dwelling for non-residential purpose, rent cannot be collected due to legal dispute, major structural changes etc. Under such circumstances, a dwelling is substituted with similar type/ category of dwelling i.e. rented is substituted with rented dwelling, rent free is substituted by rent free dwelling and self- owned by self-owned dwelling. In case, a dwelling is treated as casualty in successive two rounds, ensured after a second visit in a sub-round, the dwelling should be substituted by a dwelling available in the frame in a circular manner but nature of dwelling must be same. However, the substituted dwelling may belong to a different sector as compared to the original dwelling.

Compilation of Housing Index

Chain Base Method: It is unrealistic to assume that all the sample dwellings would remain either occupied or be in the same condition during every successive Round. Therefore, instead of working out price relatives directly with reference to the base year prices, as in the case of other items of the index basket, the rent relatives of all the dwellings in the sample are worked out on the basis of total rents of the sampled dwellings in current Round of RHRS with reference to the previous Round of RHRS. The rent relative of the current Round is then multiplied with the house rent index of the previous Round to obtain the house rent index for the current Round and in this manner a chain to the base year is established. This is how Chain Base Method is followed in the compilation of House Rent Index.

In this method the total net rent of the sample dwellings during the current round (6 month period) is expressed as a percentage of the corresponding net rent of the previous round and this percentage is

multiplied by the rent index of the preceding round to yield the index for the current round. The house rent index for the rented and comparable rented dwellings is compiled separately by this procedure. Since, the rent for rent-free dwellings is taken as zero, the house rent index for such dwellings is kept frozen at 100.

The three housing indices (rented, self-owned and rent free houses) are combined using weights which are proportions of working class families residing in rented houses, self-owned houses and rent free houses as revealed by the main survey. The Index is calculated on round basis once in every half year and utilized in the compilation of centre-wise general indices for January and July.

CONSUMER PRICE INDEX COMPILED BY NATIONAL STATISTICS OFFICE, GOVT OF INDIA (Base Year 2012 = 100)

The National Statistical Commission (NSC), under Dr. C. Rangarajan, in its Report (2001), observed that CPI numbers catering to specific segments of the population can be considered as partial indices only. These indices are not oriented to reflect a true picture of the price behavior and effect of price fluctuations of various goods and services consumed by the general population in the country, over a period of time. This Commission, therefore, recommended for compilation of CPI for rural and urban areas. The recommendation of NSC (2001) was further endorsed by the Standing Committee on Finance (2009-10) (15th Lok Sabha, 6th Report on Inflation and Price Rise), which asked the Government to act upon this recommendation without any further delay and accordingly expedite the compilation of the nation-wide Consumer Price Index for urban and rural areas, as a prelude to formulating a national CPI.

In this backdrop, the Technical Advisory Committee (TAC) on Statistics of Prices and Cost of Living (SPCL) in its forty-fourth meeting held on 30th December, 2005 took the following decisions:

- a) The resources proposed to be utilized for revision of CPI (UNME) may be used for compilation of CPI (Urban) and CPI (Rural).
- b) Existing series of CPI (UNME) may be continued without revision till CPI (Urban) series gets stabilized.
- c) Consumer Expenditure Survey (CES) data of the NSS5 61st round may be used for construction of weighing diagrams for proposed CPI (Urban) and CPI (Rural) series.

Accordingly, the National Statistics Office (NSO), Ministry of Statistics and Programme Implementation started releasing Consumer Price Indices (CPI) on base 2010=100 for all-India and States/UTs separately for rural, urban and combined every month with effect from January, 2011. The Price Reference Year for this series is 2010, whereas Weight Reference Year is 2004-05. Ideally, these two reference years should be identical so that prices are collected of those items which belong to the basket of consumers in true sense. It is not always possible to have both the reference years identical, but it is desirable to minimize the gap between these two. The base year has been accordingly revised from 2010 to 2012, and the revised series is released w.e.f. January, 2015. The basket of items and their weighing diagrams have been prepared using the Modified Mixed Reference Period (MMRP) data of Consumer Expenditure Survey (CES), 2011-12, which is 68th Round of National Sample Survey (NSS). This has been done to make it consistent with the international practice of shorter reference period for most of the food items and longer reference period for the items of infrequent

consumption/purchase. The weighing diagrams of old series of CPI were based on the Uniform Reference Period (URP) data of CES, 2004-05, of the 61st Round of NSS. With this change in the weighing diagrams, the gap between Weight Reference Year and Price Reference Year (Base Year), which was six years in the old series, has now been reduced to six months only. Many methodological changes have also been incorporated in the revised series to make the indices more robust.

The year in which the average prices, of goods and services consumed, are taken as base price and equated to 100 and accordingly, CPI for Base Year is 100. The year in respect of which the data of consumer expenditure survey was used to compute weights for aggregating elementary indices to compile higher level indices i.e. sub-group, group and overall indices. MMRP - Data on expenditure incurred are collected for the items falling under edible oil, egg, fish and meat, vegetables, fruits, spices, beverages and processed foods, pan, tobacco and intoxicants during last seven days; clothing, bedding, footwear, education, medical (institutional), durable goods during last 365 days; all other food, fuel and light, miscellaneous goods and services including non-institutional medical; rents and taxes during last 30 days.

WEIGHTING DIAGRAM

Weighing diagram gives the share of each item in the total consumption expenditure in a CES. The weighing diagrams for the CPI series (Base 2012=100) have been derived on the basis of average monthly consumer expenditure of an urban/rural household obtained from MMRP data of NSS 68th round Consumer Expenditure Survey (2011-12). Only consumption expenditure has been considered for the purpose of

preparation of weighing diagrams. Non-consumption expenditures, like legal expenses etc. have been excluded.

Further, it is neither necessary nor desirable to include all consumption items figuring in the Consumer Expenditure Survey (Schedule – 1.0, NSS 68th Round) in the CPI basket. Inclusion of items having negligible weights/shares and also consumed by very few households will make the basket big and virtually have no impact of these items on the overall index. On the other hand, large number of items may also increase the chance of non-response error. At the same time, the basket should not be too small. It should be of optimum size covering all sections of items in a more representative way. Keeping only one benchmark criterion may not lead to a representative basket, therefore, multiple norms have been designed to include administered items, items having reasonable share of expenditure, and items consumed by most of the households in a given State/UT.

WHOLE PRICE INDEX COMPILED BY O/o ECONOMIC ADVISOR, GOVT OF INDIA (Base Year 2004-05 = 100)

IMPORTANCE OF WHOLESALE PRICE INDEX

In a dynamic world, prices do not remain constant. Inflation rate calculated on the basis of the movement of the Wholesale Price Index (WPI) is an important measure to monitor the dynamic movement of prices. As WPI captures price movements in a most comprehensive way, it is widely used by Government, banks, industry and business circles. Important monetary and fiscal policy changes are often linked to WPI movements. Similarly, the movement of WPI serves as an important determinant, in formulation of trade, fiscal and other economic policies by the Government of India. The WPI indices are also used for the purpose of escalation clauses in the supply of raw materials, machinery and construction work.

NODAL OFFICE FOR COMPILATION OF WPI

The Office of the Economic Adviser in the Department of Industrial Policy and Promotion, Ministry of Commerce & Industry is responsible for compiling WPI and releasing it. The Office published for the first time, the index number of wholesale prices, with base week ended August 19, 1939= 100, from the week commencing January 10, 1942. Since 1947 the index is being published regularly.

Revision of base year of All-India Wholesale Price Index (WPI) from 2004-05 to 2011-12.

The Government periodically reviews and revises the base year of the macroeconomic indicators as a regular exercise to capture structural changes in the economy and improve the quality, coverage and representativeness of the indices. In this direction, the base year of All-India WPI has been revised from 2004-05 to 2011-12 by the Office of Economic Advisor (OEA), Department of Industrial Policy and Promotion, Ministry of Commerce and Industry to align it with the base year of other Macroeconomic indicators like the Gross Domestic Product (GDP) and Index of Industrial Production (IIP).

The Wholesale Price Index (WPI) series in India has under gone six revisions in 1952-53, 1961-62, 1970-71, 1981-82, 1993-94 and 2004-05 so far. The current series is the seventh revision. The revision entails shifting the base year to 2011-12 from 2004-05, changing the basket of commodities and assigning new weights to the commodities. It has generally been the practice to undertake the revisions on the advice of a Working Group constituted each time. For the new series with base 2011-12=100, a Working Group was constituted on 19th March 2012 chaired by Late Dr. Saumitra Chaudhri, Member, erstwhile Planning Commission and comprised most stakeholders.

New Weighting Structure

The major changes in weights, number of items and quotations between WPI 2004-05 and WPI 2011-12 are given in the table below.

Major Group	Weights		No. of Items		No. of Quotations	
	2004-05	2011-12	2004-05	2011-12	2004-05	2011-12

BRIEF ANALYSIS

CHAPTER – 2

TREND OF OVERALL INFLATION RATES IN DELHI, BASED ON CPI (IW)

Overall monthly inflation rates (point to point basis) in Delhi, based on CPI (IW) are given in following Statement 1.

STATEMENT-1			
MONTH AND YEAR WISE CONSUMER PRICE INDEX NUMBERS FOR INDUSTRIAL WORKERS IN DELHI (GENERAL INDEX) DURING 2018-2020			
Month/Year	Base Year 2016=100		
	2018	2019	2020
1	2	3	4
January	94.7	103.5	111.3
February	94.3	103.9	110.3
March	93.6	105.3	110.3
April	93.6	106.0	111.7
May	93.6	106.7	111.3
June	94.0	107.1	110.3
July	100.4	108.9	112.1
August	101.4	109.2	112.4
September	101.8	110.3	112.7
October	101.8	109.6	113.2
November	100.7	109.6	113.8
December	100.4	110.3	112.3
Annual Average	97.5	107.5	111.8
% variation over previous year	7.0	10.3	4.0

Inflation, based on CPI (IW), has been ranging from 4.0% to 10.3% during the years 2018 to 2020. The price rise was recorded as 4.0% in the year 2020 as compared to 10.3% during the year 2019.

Month wise and average annual inflation rates observed in the CPI (IW) in Delhi are given as follows:

Statement 2				
MONTH AND YEAR WISE VARIATION IN CONSUMER PRICE INDEX NUMBERS FOR INDUSTRIAL WORKERS IN DELHI (GENERAL INDEX) DURING 2018-2020 (In %)				
Month /Year	Base Year 2016=100			
	2018	2019	2020	Average Rate
1	2	3	4	5
January	7.2	9.3	7.5	8.0
February	6.8	10.2	6.2	7.7
March	5.5	12.5	4.7	7.6
April	5.2	13.2	5.4	7.9
May	4.7	14.0	4.3	7.7
June	5.1	13.9	3.0	7.3
July	7.6	8.5	2.9	6.3
August	8.3	7.7	2.9	6.3
September	9.1	8.3	2.2	6.5
October	9.6	7.7	3.3	6.9
November	7.6	8.8	3.8	6.7
December	7.6	9.9	1.8	6.4
Annual Variations	7.0	10.3	4.0	

Month wise analysis of variations observed in the CPI (IW) in Delhi reveals that annual average inflation rates during the period 2018 to 2020 was ranging between 6.3% during the months of July and August to 8.0% in the months of

January. During the year 2020, the maximum inflation rate was observed in the month of January with 7.5% and minimum in the month of December with 1.8 % increase over the corresponding month of previous year.

A comparative picture of Group wise CPI (IW) in Delhi During the years 2018 to 2020 may be seen in the Statement 3 as follows:

STATEMENT-3				
GROUP WISE CONSUMER PRICE INDEX NUMBERS				
FOR INDUSTRIAL WORKERS IN DELHI (ANNUAL AVERAGE)				
	GROUP	Base Year 2016=100		
		2018	2019	2020
1	2	3	4	5
1	FOOD & BEVERAGES	101.9	107.7	114.7
	% variation over previous year	1.4	5.7	6.5
2	PAN, SUPARI, TOBACCO & INTOXICANTS	117.5	120.3	131.3
	% variation over previous year	6.4	2.4	9.1
3	CLOTHING & FOOTWEAR	107.0	109.8	110.9
	% variation over previous year	7.2	2.6	1.0
4	HOUSING	84.2	111.1	116.9
	% variation over previous year	26.8	31.9	5.2
5	FUEL AND LIGHT	109.8	101.3	78.6
	% variation over previous year	5.6	-7.7	-22.4
6	MISCELLANEOUS	104.6	107.6	110.8
	% variation over previous year	2.0	2.9	3.0
7	GENERAL INDEX	97.5	107.5	111.8
	% variation over previous year	7.0	10.3	4.0

FOOD & BEVERAGES

In food & beverages group, an inflation rate of 6.5% was observed during the year 2020, whereas it was 5.7% during the year 2019.

PAN, SUPARI, TOBACCO & INTOXICANTS

In pan, supari, tobacco and intoxicant group, an inflation rate of 9.1% was observed during the year 2020, whereas it was 2.4% during the year 2019.

FUEL AND LIGHT

In fuel and light group, a negative inflation rate of 22.4% was observed during the year 2020, whereas a negative inflation rate of 7.7% was also observed during the year 2019.

HOUSING

As per CPI in housing group, an inflation rate 5.2% was observed during the year 2020, whereas it was 31.9% during the year 2019.

CLOTHING & FOOTWEAR

In Clothing, bedding and footwear, an inflation rate of 1.0% was observed during the year 2020, whereas it was 2.6% during the year 2019.

MISCELLANEOUS

The miscellaneous Group consists of items falling under the categories of medicines, medical services, education services, stationery, recreation, transport and communication, personal care effects, household requisites and other services viz. hair cutting, tailoring etc. In Miscellaneous group CPI, an inflation rate 3.0% was observed during the year 2020, whereas it was 2.9% during the year 2019.

INFLATION RATES CALCULATED BY CPI (IW) IN DELHI AND ALL INDIA

A comparative picture showing the annual inflation rates in Delhi observed during the years 2018 to 2020 as compared to all India may be seen in the Statement 4 below:

Statement -4			
YEAR WISE INFLATION RATES AS PER CPI (IW)			
IN DELHI AS COMPARED TO ALL INDIA (GENERAL INDEX) DURING			
2018-2020 (Base Year 2016=100)			
Year	% variation over previous year		
	2018	2019	2020
DELHI	7.0	10.3	4.0
ALL INDIA	4.9	7.6	5.6

It is evident from the above statement that during the years 2018 and 2019, Delhi has higher inflation rates as compared to All India. However, during the year, 2020, inflation rate in Delhi was 4.0% and in All India, it was 5.6% over previous year.

FINANCIAL YEAR WISE TREND OF OVERALL INFLATION RATES IN DELHI AND ALL INDIA BASED ON DIFFERENT PRICE INDICES VIZ. CPI (IW), CPI (COMBINED) & WPI:

A comparative picture showing the annual inflation rates in Delhi observed during the financial years 2018-19, 2019-20 and 2020-21 as compared to all India level may be seen in the following Statement:

Statement-5

CPI(IW) and CPI(C) for DELHI

INDICES	2018-19	2019-20	% Variation	2019-20	2020-21	% Variation
CPI(IW)	100.0	109.1	9.1	109.1	112.4	3.0
CPI(Combined)	140	145	3.6	145	149.8*	3.3

***CPI (combined) is not provided for the month April & May of the year 2020 by NSO.**

CPI(IW), CPI(C) and WPI for All INDIA

INDICES	2018-19	2019-20	% Variation	2019-20	2020-21	% Variation
CPI(IW)	104.1	112.0	7.6	112.0	117.6	5.0
CPI(Combined)	140.0	146.0	4.3	146.0	155.3	6.4
WPI	119.8	121.8	1.7	121.8	123.4	1.3

CPI(IW) Base year 2016=100 CPI(C) Base year 2012 = 100 WPI Base year 2011-12=100

It is evident from the above statement that average annual inflation rates, based on CPI (IW), for the years 2019-20 and 2020-21, were 7.6% and 5.0% respectively at all India level, whereas as per CPI (Combined) compiled by the NSO for the years 2019-20 and 2020-21 the inflation rates stood at 4.3% and 6.4% respectively. However, inflation rate based on WPI for the years 2019-20 and 2020-21, were 1.7% and 1.3% respectively.

For Delhi, average annual inflation rates, based on CPI (IW), for the years 2019-20 and 2020-21, were 9.1%, and 3.0% respectively as compared to 3.6%, and 3.3% inflation rates calculated for Delhi based on CPI (Combined) compiled by the NSO during the years 2019-20 and 2020-21 respectively.

**Price trends of Consumer Price Index (IW) in Major Cities for
Calendar Year 2020:-**

A comparative picture showing the average CPI (IW) for the calendar year 2020 in respect of 15 selected major cities/centre may be seen in statement 6.

Statement-6

S.No.	Centre	Average General Index- 2020
1.	Delhi	111.8
2.	Bhopal	112.2
3.	Mumbai	112.3
4.	Indore	112.4
5.	Bengluru	112.9
6.	Jaipur	113.0
7.	Faridabad	115.2
8.	Hyderabad	116.3
9.	Chennai	118.2
10.	Ghaziabad	118.4
11.	Chandigarh	118.8
12.	Varanasi	119.0
13.	Amritsar	120.8
14.	Lucknow	120.9
15.	Kolkata	124.2

Price trends of Consumer Price Index (IW) in Major Cities for Financial Year 2020-21:-

A comparative picture showing the average CPI (IW) for the financial year 2020-21 in respect of 15 selected major cities/ centre may be seen in statement 7.

Statement-7

S.No.	Centre	Average General Index-2020-21
1	Delhi	112.4
2	Mumbai	113.2
3	Bhopal	113.6
4	Indore	113.6
5	Jaipur	113.7
6	Bengluru	114.1
7	Faridabad	116.0
8	Hyderabad	117.8
9	Ghaziabad	119.1
10	Chennai	119.5
11	Chandigarh	120.4
12	Varanasi	120.4
13	Amritsar	120.9
14	Lucknow	122.1
15	Kolkata	125.1

It is observed from statement 6 and 7 for calendar year i.e. 2020 and financial year i.e. 2020-21 that Delhi has lowest Consumer Price Index (IW) among the selected 15 major cities/centers and Kolkata has maximum Consumer Price Index (IW).
