## P R E F A C E

The present report “Index Of Industrial Production” 2009-10 is brought by this Directorate as per the base year 1999-2000. This brochure is fourth new series with base year 1999-2000 presenting the physical growth of the registered manufacturing sector of Delhi during the year 2009-10. This methodology was devised by Ministry of Statistics & Programme Implementation, Govt. of India

The State Level IIP serves as a vital quantitative indicator of trends in the registered manufacturing segment in the short term. This is a useful and instant tool in the hands of Planners and Policy makers to gauge the health of the industry as the final statement on this sector comes with publication of results of Annual Survey of Industry with a time lag of 2 Yrs. The index of Industrial Production also serves as a deflator for estimation of industrial production at constant prices. This report gives trends in index month-wise, industry division-wise and broad sub sector-wise.

This publication was brought by the ASI /IIP unit of this Directorate. The special efforts put in by officers and staff of this unit in the collection, scrutiny, compilation of index deserves special mention. This Directorate is indebted to the co-operation extended by all industries /units for supply of data periodically. This Directorate is also grateful for the help extended by the officers of the Labour Department of the GNCTD.

3.3 Index Numbers at 5 Digit / Item Level of NIC-1998	17-20
4 Index of Industrial Production with Use Based Classification of Items of production	24-32

# CHAPTER I

## INTRODUCTION

**Index of Industrial Production (IIP) is of immense use for measuring the industrial development of a State/Territory. The index indicates relative changes over the time in the volume of production in non-agricultural commodities and it is effective tool to measure the trend of current Industrial Production . At the National level, the index of industrial production is being compiled by the Central Statistical Organisation, Govt. of India and is released on monthly basis. This index, however, does not serve the purpose for evaluating the industrial growth of a State/Union Territory. Therefore, the Directorate of Economics and Statistics has been compiling/releasing the index of industrial production for the National Capital Territory of Delhi on quarterly/annual basis since 1976.**

**In the first series, 1970 was the base year for compiling the IIP both by the Central Statistical Organisation & Directorate of Economics and Statistics. The base year was, however, shifted to 1980-81 in the year 1987 as per recommendations made by the Working Group so as to accommodate the latest structural developments that have taken place in the industrial profile during the seventies. Accordingly the Directorate of Economics and Statistics also adopted the base year of 1980-81 since 1989-90.**

**The main lacuna of State Level Index of Industrial Production (IIP), is that the Indices lacked comparability due to use of different base year, periodicity & data sources etc. The need for a comparable state level IIP to facilitate studies on the state-wise performance of Industrial sector has been felt for quite some time. Accordingly a Technical Advisory Committee (TAC) was constituted in June, 1995 to formulate guidelines and methodology for preparation of comparable IIP. On the basis of recommendations of TAC it was decided to bring forward the base year from 1980-81 to 1993-94. Subsequently the base year was revised from 1993-94 to 1999-2000 to compile comparable IIP.**

**Accordingly initial guidelines were prepared in July 2004 and the item basket & weighting diagram were prepared and got approved by CSO. This is the Fourth report for Index of Industrial Production for the year 2009-10 with base year 1999-2000.**

## CHAPTER II

### METHODOLOGY

#### 1. SELECTION OF ITEM BASKET

The item basket for the revised series with base year 1999-2000 has been prepared as per the guidelines received from Central Statistical Organization. Items are identified in such a manner that all the items having at least .20% contribution in the total output of respective 2-digit categories of NIC 1998 are selected. Further, the items in the data base of ASI in 1999-2000 are assigned use based codes i.e. basic goods, inter-mediate goods, capital goods and consumer goods to arrive at item basket of each use based category.

The overall size of item basket has been decided keeping in view the manageability of the compilation. Efforts are made to ensure that items included in the item basket are distinct in nature so that problem will not arise at the data collection stage. It has also been kept in mind that finally selected items are of the nature for which a regular and steady flow of production data will be available.

Finally selected items are classified under 4-digit industry groups which in turn classified under 3-digit industry groups and further classified under 2-digit industry groups for compilation of indices at different stages.

#### 2. ALLOCATION OF WEIGHTS

In allocation of weights, total weight is taken as 1000 and this is apportioned in two industrial sectors namely registered manufacturing and electricity. The sector weights are then allocated to its 2-digit industry groups and so on for lower level industry sub-groups. Lastly the 4-digit level weights are distributed to the selected items falling under the respective 4-digit classes. The total weight of 1000 in the new series has been distributed to registered manufacturing and electricity sectors on the basis of Gross Value Added (GVA) for base year i.e. 1999-2000. The weight of registered manufacturing sector is further distributed to various 2-digit industry groups (15-36) of NIC 1998 in proportion to their GVA figures. The 2-digit level weights are further distributed to represent 3-digit groups which in turn distributed to 4-digit classes within the 3-digit respective groups represented in the item basket. Finally 4-digit level weights are distributed to selected items in the respective 4-digit classes in proportion to item-wise GVO figures. It is classified that weight allocation at item level has been done in proportion to item-wise GVO because item-wise GVA figures are not available.

The weighting diagram prepared in this manner has also been used for arriving at indices for different use based categories.

**[G-1] INDEX ON INDUSTRIAL PRODUCTION DELHI  
BASE : 1999-2000  
WEIGHTING DIAGRAM AT 2 DIGIT LEVEL OF NIC-1998**

## **CHAPTER III**

### **A BRIEF ANALYSIS OF IIP**

For the purpose of compiling the index, the industrial sector has been divided into manufacturing and electricity sectors with the weights of 749.6924 and 250.3076 respectively out of total weight 1000. The manufacturing sector has further, been divided into 19 major industrial groups at 2 digit level excluding electricity.

#### **SALIENT FEATURES**

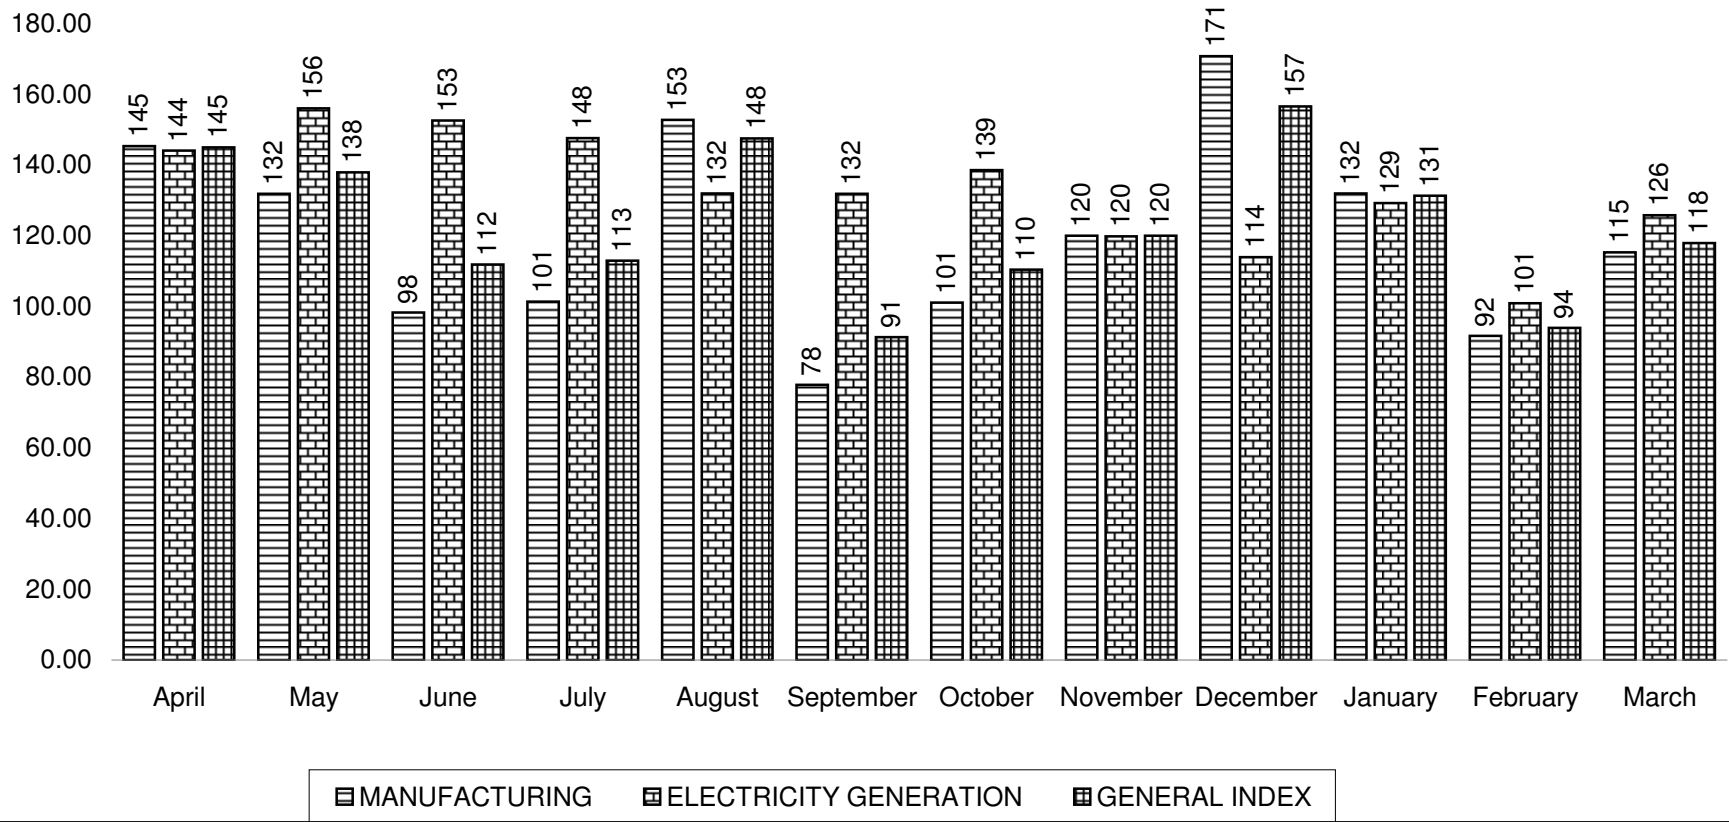

Average Annual Index of Industrial Production has shown a decrease of (-) 15.02% as compared with the previous year's decrease of 15.86%. During 2008-09 IIP was 144.81 which decreased to 123.06 during 2009-10. It is clear from table 3.1 that except the months of July 2009 and December 2009 there was decline in the index throughout the year. Maximum percentage increase in production is noticed in the month of July during the year as compare to the month of October during the previous year. Similarly, maximum percentage decline in production was noticed in the month of March 2010 whereas previous year recorded maximum percentage decline in the month of July 2008. Both the Manufacturing and Electricity sector has shown a decline of (-)17.23% and (-)8.40% respectively during the year 2009-10. Decline in Electricity sector was due to shutting of one unit of Indraprastha Power Generation limited.

It is evident from table 3.2 that out of 20 groups at 2 digit level, growth has been observed in 10 groups and for the remaining 10 groups a decline has been observed in manufacturing activity when compared with previous year 2008-09. Maximum growth of 98.63% has been observed in respect of Manufacture of Other Transport Equipment(35) followed by Manufacture of Rubber and Plastic Products (25) and Manufacturing of Furniture (36) where a growth of 30.12% & 24.41% has been observed respectively. For remaining groups where growth is observed percentage increase with the previous year varies from 0.40% to 10.80%.

It may be seen that maximum decline of 80.67% has been observed in case of Manufacture of Tobacco Products(16) followed by Manufacture of Publishing Printing and Reproduction of Recording Media (22) and Manufacturing of Chemicals and Chemical Products (24) where a decline of 63.22% & 23.09% has been observed respectively. For remaining groups decline varies from 5.40% to 19.68%. In case of Manufacturing of Tobacco Products the decline is mainly attributed to closing of unit while in case of Printing and Publishing shifting of unit out of Delhi was responsible for fall in Index.

TABLE 3.1 : MONTH WISE INDEX OF INDUSTRIAL PRODUCTION IN MAJOR SECTORS OF INDUSTRY									INCREASE/DECREASE OVER THE PREVIOUS YEAR (PERCENT)

## CHAPTER – IV

### Use Based Index of Industrial Production

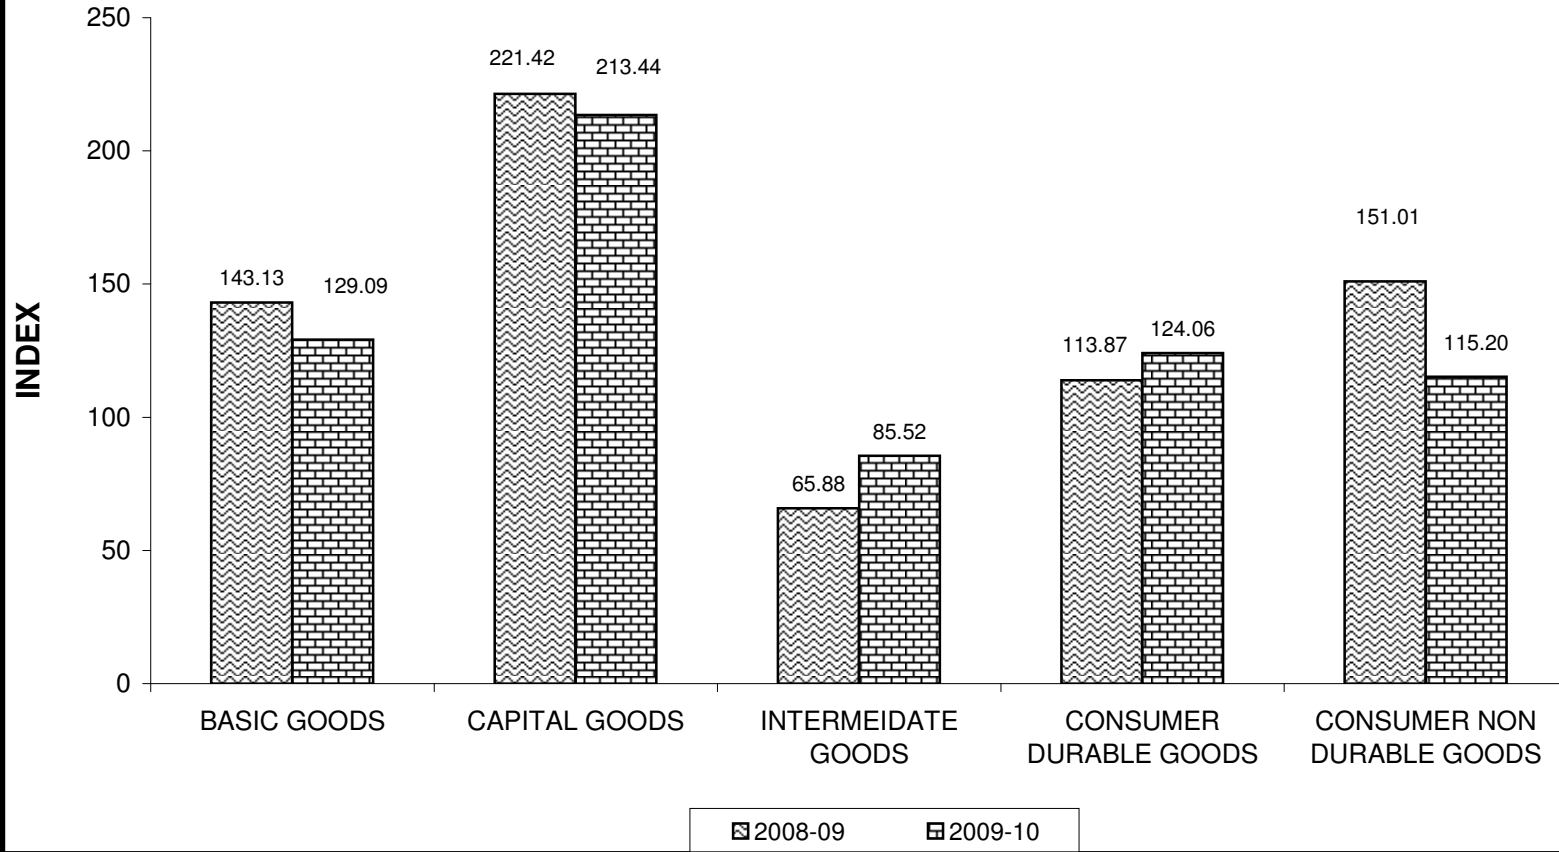

Different industries have been classified on the basis of uses of items produced by these industries to capture the performance of different industrial groups. On the analogy of the use based classification adopted by Central Statistical Organisation, item basket of production has been classified into four main groups. These groups consist basic goods, capital goods, Intermediate goods and consumer goods. Consumer goods are further subdivided into consumer durable goods and consumer non-durable goods. Use based monthly index of Industrial Production will provide the information regarding the performance of above mentioned industries which are classified according to their product usage.

Weighting diagram for use based categories reveals that consumer goods industry is predominant in the industrial production of NCT of Delhi and covers 58.64% of total production with a share of 4.59% for consumer durable goods and 54.05% for consumer non-durable goods. Share of Basic goods industries, Capital goods industries and Intermediate goods industries are 27.69% ,5.99% and 7.66% respectively when weights are allocated on the basis of their productions in the base year.

Performance of industrial groups as per Use Based Classification for the year 2009-10 has been presented in Table 4. It is evident that Intermediate Goods Industry has performed the best by registering growth of 29.81% during 2009-10 as compared to previous year 2008-09. When consumer durable and non durable goods are analysed separately it has been observed that consumer durable goods industry has shown an impressive growth of 8.95% while that of non durable goods industry has shown a decline of 23.71%. Basic Goods industry has shown a decline of 9.81% and Capital Goods Industry registered a decline of 3.60%.

Weighting diagrams and annual average indices have also been depicted through graphical representation in the following pages.

(G-4) GRAPHICAL REPRESENTATION OF IIP AS PER USE BASED CLASSIFICATION
